

## Product Recycling

Qcells is committed to enabling a circular economy within the solar sector and recognizes the importance of responsible end-of-life product management. Qcells works with SOLARCYCLE, the industry's leading and SEIA approved recycling partner for our own recycling needs and for those of our customers. Solar panels that cannot be utilized due to damage or end-of-life can be recycled through SOLARCYCLE's advanced patent-pending recycling technology, which extracts more than 95% of the panel material value.

SOLARCYCLE can provide pickup of solar panels from any US State to be transported to their recycling facilities, though service from Hawaii or Alaska may incur higher costs. Currently, Solarcycle does not process panels outside of the United States. For any warranty claims, please follow the Qcells claim submission process on our website, <https://us.qcells.com>. Please consult with your insurer for other damage claims or non-warranty claims, which would incur a cost.

For all other product or end-of-life recycling, you may contact SOLARCYCLE or other qualified solar recyclers to process your service at your own cost. To get a quote and schedule a pickup, please go to: <https://www.solarcycle.us/contact>.
