

EcoRecycle by Qcells:

Recycling Solar. Restoring Impact.

Paving the Way for a Circular Energy Future

EcoRecycle by Qcells is dedicated to becoming a responsible and innovative leader in solar recycling. We're the first company in the U.S. to build an integrated solar value chain—covering manufacturing to recycling—all while setting new standards in environmental stewardship.

Competitive Solutions and Comprehensive Services

Fair Pricing

We offer End-of-Life (EOL) and waste module collection services at highly competitive prices, ensuring the best value compared to other providers.

Complete Take-Back Service

Scalable, volume-based collection and certified recycling of end-of-life modules through Qcells, with real-time tracking, streamlined reverse logistics, and advanced material recovery that reduce landfill waste, project costs, and compliance risk.

Collection Credits

Collection Credits may be applied to direct recyclers, collection hubs, utility-scale collection agreements, wholesale app users, and PV system repowering projects that use Qcells modules and/or storage systems.

Disaster Recovery

EcoRecycle delivers competitive collection and recycling services following severe events, including but not limited to storms, tornadoes, and environmental cleanup operations, helping minimize landfill waste during recovery.

Compliance, Traceability, and Risk Mitigation

At the Forefront of Compliance

Our program ensures complete traceability and minimizes your long-term environmental liability

Traceability, Chain-of-Custody Assurance, and Recycling Certification

Documented chain-of-custody records are maintained throughout the project lifecycle, with a Recycling Certificate issued to support regulatory compliance documentation, material disposition records, and customer sustainability reporting.

Leading-Edge Technology

We use leading-edge recycling technology developed in-house and with global partners, to separate components and detect impurities. All while avoiding hazardous, thermal, or chemical processing, and enabling full recycling of crystalline bifacial modules.

Pre-Recycle Agreements: De-Risking Decommissioning

No-cost Pre-Recycle Agreements to help asset owners and developers mitigate future risk, support decommissioning bond and O&M planning, and engage communities early with responsible end-of-life recycling plans.

Circular Economy and Optimized Logistics

Our integrated approach maximizes material recovery and minimizes environmental impact.

GA Center Operational

Our first recycling center in White, Georgia is fully operational and open for scheduled customer tours, with additional facilities currently under development.

Reverse Logistics Network

We utilize partner facilities and drop-off locations across the Northeast, Midwest, and West to maximize efficiency, minimizing transportation costs and carbon footprint.

Take the Next Step

EcoRecycle by Qcells is your strategic partner for responsible, efficient, and cost-effective solar module lifecycle management.

Get Started Today

Contact us today to schedule a discussion about a no-charge Pre-Recycle Agreement and or receive a tailored, competitive quote on your EOL and waste module management needs.
